EM EARSET CABLE

SINGLE EARPHONE INTEGRATION

The EM Earset Cable enables low-profile and comfortable integration of industry-leading Countryman Earsets and Shure Sound Isolating™ Earphones. An ideal choice for broadcasters, pastors, artists, and performers desiring exceptional sound quality and isolation, the cable interfaces on one end to any Countryman Earset and any detachable Shure Sound Isolating™ Earphone, and on the other end to a wireless transmitter bodypack and a wireless receiver bodypack. Both the earset and earphone are fully detachable, facilitating easy and rapid on-site replacement and multiple-user sharing of the device.

Performance

Countryman Earsets provide high quality voice pick-up while rejecting ambient noise and feedback. Shure Sound Isolating™ Earphones create a detailed and expansive sound stage for the user, in a slim and ergonomic mechanical package. The EM Cable allows seamless integration of these two industry-leading products for a superb user experience.

Ruggedness

We designed this cable for minimum visibility and maximum durability. The 2mm diameter rugged middle section branches off at both ends to two 1mm diameter ultra-low-profile cables. Aramid strength members and engineered alloys reinforce the cable, protecting it from flexing and tugging.

Style and Comfort

The EM Cable reduces the hassle, visual distraction, and discomfort of wearing and routing two separate cables. Available in four colors designed to match skin tones, the entire assembly virtually disappears in use.

Versatility

We understand that you may need to make quick and easy changes on the road: switching the mic from one ear to the other, changing the mic or cable color, accommodating costume changes. That's exactly why we designed the EM cable to be so versatile.

Detach the earset or earphone instantly using snap-on connectors. Use the miniature cable clips, slider, and collar clips to customize the fit to be both comfortable and discreet.

Countryman Earsets, Shure Earphones, transmitter and receiver sold separately. Supplied with protective case.

Compatibility:

Earsets: E6 Omni, E6 Directional, E2 Earset, E6 Flex Omni, E6 Flex Directional, E6i Omni, E6i Directional, E6s Compact.

Earphones: SE535, SE425.

Four Color Options:

Black, Cocoa, Tan, and Light Beige.

Fully Detachable Design:

Detach the earset or earphone in seconds using the snap-in connectors.

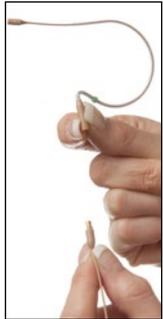

Countryman Earsets Meet Shure Earphones

EM Earset Cable Diagram

The EM Cable interfaces at one end to a Countryman Earset (E6 shown here) and a Shure Sound Isolating™ Earphone (SE425 shown here). At the other end it connects to a wireless transmitter (Shure UR1M shown here) and wireless receiver (Shure P9R shown here).

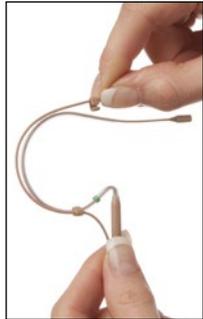

How do I fit an EM Cable?

1. Attach the mic and earphone to the EM Cable.

2. Attach the earphone cable to the earset.

3. Put the mic over your ear.

4. Put the earphone in your ear.

5. Clip the cable to your collar under the Y-split.

6. Connect the cable to your bodypacks.

Countryman Earsets

Delivering value, comfort and exceptional sound quality, Countryman Earsets lead the head-worn microphone industry for the widest variety of applications. Positioned consistently near the mouth, earsets provide better gain-before-feedback than any lavalier on the chest.

The E6 Omni Earset delivers pure sound, versatility, and superb isolation from ambient noise. With a 0.1" (2.5 mm) diameter mic element, and four color options designed to match skin tones, the E6 Omni virtually disappears against the face. To get even more rejection of ambient noise, choose the E6 Directional, which features a unidirectional mic element for improved isolation. Our most discreet earset is the E2, which lives just in front of the ear and uses a directional mic element to deliver solid gain-before-feedback.

COUNTRYMAN ASSOCIATES, INC

Shure Sound Isolating™ Earphones

Designed for the demanding specifications of live performance, Shure Sound Isolating™ Earphones provide an unparalleled combination of sound signatures, noise isolation and build quality in small and comfortable universal-fit designs. No other earphone line delivers the same level of sound quality, comfortable fit and customer service with comparable heritage and durability.

Featuring Triple High-Definition MicroDrivers, the SE535 uses a dedicated tweeter and dual woofers for incredibly spacious sound with rich bass. Featuring Dual High-Definition MicroDrivers, the SE425 uses a dedicated tweeter and woofer for an accurate and balanced sound stage. Sound Isolating sleeves in multiple sizes provide up to 37 dB of isolation.
